Solder the resistance to the anodo and the other extremity of the resistor as depicted at the rear more welder who came who is the positive pivot of a capacitor. Done deal. So if you are still with me, here's the question. Hi Gens new member here and my first post, so please be kind. It is not a â € capacitor. Done deal. So if you are still with me, here's the question. Hi Gens new member here and my first post, so please be kind. It is not a â € capacitor. maximum with the minimum. I would be hesitant to mess with anything in the service menu. Reactions: Tecnicoloco, Slowmover, CB590 and 1 other person can you give us some information on the NPC/RC? I bought two Q6 radio, a second hand, 3 months and the other new brand. It seems that there is a lot of space to mount the mobile units on the lower side of the shelves. NPC Slash Swing Mod is the following, 1n 4148 Cathode signal diode at the center leg of AM regulator. Here are my results. Hi Shadetree, Anytone 5 5 5 5 and 5555 n both have practically the same identical PA phase. Foolish of Anytone and Striker to have death keys out of the box that at the top. Unfortunately, there is no connection on the bottom of the card for this. So far it's a big radio, I like the RX better than 2950dx I pulled it out of the box, I connected it and started talking. He didn't, but it was very hot. If he had 12 meters, I would be tempted, but for now I will continue to run my 30 -year -old Lincoln. Send me an email to minuscolo@tinyscbshop.com. You asked for endings - they made away with Bi -Polar and now they are using - LD -Mos linear device - Mos - Fet Drawings - which makes the bi-point a current Muncher, with the Driven tension "Field Overxim" too much The work too much Polesugubieopher, Aodio When peoping mipating 55 55 rate 31 31 3, 39 31 3-3 The y. Because the "lots" purchased by the manufacturer have made them pre-set their radios bias' levels for that particular MOSFET design. See? 73 Jeff Reactions: HomerBB Wish I had gotten the CRT 9900, but still happy with mine. If you're talking about the 2030+ believe they are overrated for what it was designed to do and does really well as is. Larry¢ÃÂÂs had at least one, but I think it¢ÃÂAs carry-out only. If you have saved a copy of your original firmware (which you should always do), what are the chances it could be flashed back if the 9900 firmware didn't work? I bought the CRT 9900 version with 12 meters couple weeks ago. The ÅT-6666 runs the Mic it has wired up for it to enable features and is programmed for it - if you need a replacement mic for it - unless you are willing to lose a lot of features and can tolerate the audio audible differences the filtering the radio uses - it is set up specifically for their mics, not power mics. - remember that the connector pins need to go somewhere - so be aware that to even make it key up - you may need to take it to a shop unless you're comfortable with how the manual shows you what to wire to where and do it yourself... That's just my take on it I believe the only reason people would tell you to swap out the mosfets for different ones are because they were running it with the 20 watt dead key out of the box. 30-40¢ÂÂÂ difference in arrival time. Make sure you are soldering the other end of the resistor to the positive end of the resistor to the positive end of the resistor to the resistor to the resistor to the positive end of the resistor to the resis the same time spent. Page 4 Hi Gens new member here and my first post, so please be kind. After checking the tensions of bias, the vector adjustments and the typical adjustments of the light works just as well as the V2 (with 13n10's) I am using as a piece of furniture but much cool. I know there are several people who had blown up with the previous ones using the N10 and even if I have not encountered that problem only the time as they do to longevity. Even with the volume to the end, it still happens. Thanks for this information. I am interested in the TX Freq adjustment for all modalities. Reactions: Wecsog, S&W & W357 and Shadetree Mechanic my brother has just bought one and I must say that the radio sounds very well out of the box. I still have to see a single problem with any of the different Anytone models that came through my bench and the same goes for Stryker. Pep, at 13.8 v. I have the programming cable but I didn't use it. Cathode of 1n4148 signal of the central pin of the regulator of.m. 73 Jeff Reactions: Wecsog, Slowmover and Homerbb Page 6 not much on this. No radio or lack of experience in using one, he does not know how to deal with the highest volume of road traffic, construction, wrecks or time. Do you make any sense? This works from the IFR -520 - but if you put in a 13n10 or something different like an Erf2030 - which could be a lot of bias tension and aggravate and blow because ... here is a photo of the final from that review. .. reactions: Wecsog and Theratt Beh, still shows the typical AM Mod, AM Power and Envelope (ALC) seems to be more than a platform to use their "Basics" - - ICR e yxalaG eires alled osrocrep li odnadna onnats - 92 o 52 arboC len etavort ecnatcaeR alled acifidom id ehcincet elled otsop la AM Regulation. Cover the microphone or play with the positioning and change the tone of the scream. 73 Jeff that vehicle now ready to run the big way! He talks about the things you want to take a broadcast to make people pass through those who operate at too low vibrational frequency. The best export I've ever owned in my experience. And you burned \$ 100 in more than fuel as having covered the same total distance as the days, but with zero savings of time.). - or work more like a Kraco Emergency Channel 9 helps the radio of the late 80s - bring you anywhere ... Another extremity of the positive pin resistance of a capacitor. DSP + in Lincoln. Reactions: S&W has just doubled the number of radio you can have. So far the radio have excellent relationships in the field that use the standard microphone, but thinking of updating to a power supply microphone, but thinking of updating to a power supply microphone, but thinking of updating to a power supply microphone, but thinking of updating to a power supply microphone, but thinking of updating to a power supply microphone. Many knock them on being Chinese, but so far I have had a large strip with the Anytone group and I am a boy from the preference for preference for preference. I just performed that trip of 1,000 miles to 64 in a SUV and I compared the identical survey who runs 70 burns enough fuel to make an extra pit stop on a 1,000 miles trip. I didn't want to worry about being honest. I recommend not more than a 7-watt dead key on maximum power. Then TX carefully reachable from there by bringing small adjustments until the power corresponded to the output power of the new radio. I was hurting myself for all 120 seconds. 73 Jeff looks really good in this way! Can you publish a source for that flexible support? 2). Top plate on this is plastic also with the plastic of the tension nut. 73 bob information on these are poor. Homer, it's the same table as 6666. Strange. It is also a nice set up and flexible. Use shrink tubes. Audioshockwave, you also drew my attention with that support. However, there is not much information about rigs out there so I figured I'd share my findings with others on here. I have a 5555 and think it rivals my 955 and only half the cost. Sorry to know that you have to purchase an original and use it to help re-align your Second Hand radio - don't worry. It does work, but is not in the traditional location of the NPC-RC. It is a one driving two mosfet p a stage. Imagine you passed me more than two hours ago, but I wound up ahead of you again. So just for future owners I wanted to say this newest batch changed to the vishay irf-520's just like what Ranger uses. To be honest, I've seen a huge decline in build quality from all ranger products and Cobra products, thin circuit boards and continuing issues with cold solder joint right out of the box. Reactions: WECSOG, Shadetree Mechanic and S&W357 Thanks all, Ive been gone for years and just starting to get interested again. View attachment 43245 73 David Nice setup! I would start out with it as a guest appearance front and center. MEANING: I¢ÃÂÂll take the bet. Clays doesn¢ÃÂÂt carry them. Reactions: Slowmover A couple of long years of making a big truck radio ¢ÃÂÂwork¢Ã came together with the last iteration. With Radios and their complexity these days, if you can just get the thing to work like the original one next to it - is a feat in itself...The lack of documentation from "overseas" has made alignments and repairs of these radios' difficult for even the experienced techs. TIM's mod uses the positive lead of E14 because it penetrates to the bottom of the board. Reactions: Slowmover I'm not technical enough to try to see whether it's possible to put 12m into play on the 6666. The positive pin is closest to the rear of the radio as pictured. Anyones thoughts on that? Be forewarned that the proper mod is with a one end 9:14 or 1 in 4148 signal tired and a 100 ohm resistor, resistor. Last edited: Mar 26, 2020 Reactions: tecnicologo, Slowmover, nbsr and 1 other person Can you give us any info on the npc/rc? The swing Mod mentioned previously will also work with the guad 5 radio. Same board, same chassis, different name on the faceplate. And the more I use this radio the more I use this radio. because no golden screwdriver has been in them. I've got 2, 1 mobile and 1 base both at 3 plus years old. 73 Jeff Reactions: WECSOG, Eldorado828 and Slowmover View attachment 44140[/QUOTE] Man, would that make me feel good to slide into that drivers seat and see that rig Good to Go. That there means high-speed, lowdrag motoring is E-Z. Why? the NPC / swing mod will work for the anytone guad 5 and guad 5 end, it's all the same circuit. Be careful as the pins of the capacitor are extremely close together. They are simply better made radios and the surface mount does not have near as many problems as through-hole components. Pin one is audio pin 3 is transmit pin 5 is ground. M DNJ shows AT-5555 only. Or us an external speaker far enough away, or have it off, doesn't happen. I like it so far, I will let you know how it holds up. I just got a 6666 so I will be looking at this again. It's also when they introduced a DEDICATED 6-pin NEW connector requirement because they needed something to help sell their Bearcat (Or BEERCAN) Bluetooth handsets - 906. And it's the only one (seen one other complaint while googling - but no solution) is makes a feed back audio squeal when its first turned on. Still have a magnum 257 blue face that suffered some odd melting of rubberized knobs not from heat but they just...melted all gluey and a cobra 350 amp in the garage sitting lol. They use a Resistor / network - which means that they still do Bias - only preset the level because they find it works best in all conditions to which they subject it - so they feed using 8.2K with a filter cap and the bias is trapped from there and place a 4.7K ACROSS resistor the line bias to fall more than half is tension at about 3.0 ~ 3.2 volts. My brother and I were talking about it the other day. I got it for Christmas. 73 Jeff Reactions: Shadetree So mechanics to bring an old wire to the surface, but after looking a lot, I can't find an alignment procedure of the Quad 6. WALCOTT shows "temporarily sold out". No more 13n10. Motivation I'm asking why the radio would drive a straight four with Toshiba 2879. Do not shorten the two or fry the PA stage. You have to try to bend your gooseneck. I own a couple of quad fives and I find they're exceptional radios. He really brings him alive and beats as much as my AT-6666 now. In a nutshell, the power it produces is more than enough for my needs and I manage it much less, the max here is 12watt PEP on SSB so I hope I will not need to change any final stage at any time soon if at all. Reactions: Technical and Slowmover Thanks for the answer, H A, I appreciate your time. It's 10 watts less, but I don't think it'll be obvious if you're not a junkie. I drive my class of 2 pills c with the radio and yield near 430 w. Last update: 17 April 2021 Reactions: WECSOG, Eldorado828, S&W357 and 1 other person Page 5 I am not technical enough to try to see if you can put 12m in play on 6666. Speaking of final stages I saw a YouTube video today of a guy running constant PTT on a Q6 without antenna, VSWR of 14 or 15 for 2 minutes to see if orucis orucis otnemanoiznuF .eredolpse never compromised and has strict rules. It is fast for the combination of average MPH and average MPG. Haha! Reactions: WECSOG, Slowmover and S & W357 AT-6666 seem to be gone. The only difference I see is the addition of 12 meters and the CTCSS card included. P.S. Keep that high-powered dead key below 8 watts! If you maintain a high-powered carrier, you will heat the MOSFETs and end up frying them. Enjoy the last modified: 26 March 2020 Reactions: William G Ransom, Slowmover, StayBolt and 2 more for what would you replace the finals for and for which. While the mod can only be performed with the diode for a higher yield in average watts, I installed it with a quad six of competition in which I can exceed 100 watts. FYI - The mod Tim has the image is not the traditional C68/R74 parallel NPC -RC mod with a diode and resistance. Now where to find... 73 Jeff, I have one now. I put them on the bench to see what they can do about power, I wanted to "calibrate" power control, so know which low, medium and high environments would give to RF. It also seems to have 13,8 V in the final in SSB mode. Any thought on the banner and a sharing of an alignment procedure would be appreciated. I aired, asked my brother (60 miles away) for radio control. When I get back free to arm with my personal things, I will put the older one on the bench to compare and see what else is changed or updated in this latest version. While I would like to get an entire procedure for a clean alignment. . Any problems occur on the road that the radio just put me in the head. I'll have to reread it a couple more times to digest it completely, but thank you for the complement. Use a nu nu ni inot ieim ied onu us ocitats adarts ad with excellent results. I did do the NPC-RC & RWB mod on my Lincoln II+ (weak low power swing) since it uses FQP13N10's in a 1x2 configuration and does not have 13.8v on the finals. Anode to a 50 ohm 1 watt resistor. Reactions: tecnicologo and Shadetree Mechanic Page 2 Big Kahuna and sunbulls that's a great piece of information and much needed here, thank you fellas! That's been needed for quite some time now. (Note in my above posts it¢ÃÂÂs not speed, but in being ready, willing & able; the waves part or the alternate route glows.) As a phenomenon, it¢ÃÂÂs uncanny. Frequency range: 25.615-30.105 MHz. Nevertheless, out of the box it really shines. Let's see if they will answer the question if 12 can be enabled on the 6666. Don¢ÃÂÂt drive faster, drive smarter. - which can make big differences in how the radio with work - staying "in stock operation (fine)" - or go off on a tangent and either "latch up" until it blows up the replacement final... 1). Hope everyone has had a blessed start to the new year! How can I tell I have version three I just got mine in yesterday they said they got from the factory 2 weeks ago Reactions: Slowmover Mine has the 13n10 in it and bands A-J this radio had troubles couldn't find jack crap on it or the info on tuning the TX chain had to send it out been 2 weeks so far the shop didn't get around to it yet so went and bought a 98vhp. So you need to operate the radio within it's original set parameters (your realignment using a another OEM one as a template can help immensely in this...) else if you blow a Final - you may have to replace not just the bad final - but the ENTIRE strip. It is banded like the quad 6. Note made, if I do, all 4 need to be changed like for like, understood. Hooked up the coax, antenna was already there. No diversions. Now you'll have full carrier development from any dead key, key.
